Edge also has the capability to manufacture and supply a full range of “special” envelopes. Special envelopes are custom designed to accommodate non-standard window size or position and special sizes or paper. Special orders are subject to minimum order quantities and offshore lead times which can be as short as four weeks with an air freight shipment.

Please contact us for a quotation that meets your requirements.

Notes on Terminology:

1. **Tropical Seal** uses a strong Dextrine glue but must be machine wetted or used as “lick’n’stick”.
2. **Peel & Seal** uses a very thin strip of release paper that is removed to expose the glue prior to closing the envelope. P&S envelopes feature a quick clean seal upon contact, good printing efficiency and prolonged shelf life for office use.
3. **Self Seal** uses two glue surfaces with one covered by a flap of paper that is flipped open prior to sealing the envelope.
4. **Pocket** envelopes are side opening versus a **Wallet** envelope which opens on the long edge.
5. **GSM** is paper weight in “grams per square metre”.
6. **Edge Envelopes** feature high quality envelope paper – brightness, printing surface and strength are key.
